*Response to Arguments*

Applicant's arguments filed December 1, 2003 have been fully considered but they are not persuasive.

Applicant argues motivation. There is no combination and therefore arguments related to motivation are unfounded and moot. The examiner has full authority to remove indication of allowable subject matter if new prior art comes to light.

Applicant further argues that they have invented an electrical field that is not induced; there is no support for this in the specification or claims. Applicant's specification clearly defines a quasi-static field as one that does not send propagating waves to a far field destination. Furthermore it absolutely no propagation takes place there can be no movement of information.

Hershey discloses the limitation regarding grid size; applicant's question of the relevance of the limitation to the Hershey invention is moot and unpersuasive.

Applicant states that Hershey communicates and is a system but is not a communication system because it's slow. This argument is unpersuasive, as applicant does not claim a communication system, much less one that is real-time.

The examiner notes again that Nealy (5,926,137) is relevant to the art of applicant's invention and is cited as such. Applicant has no authority to refute this.

In conclusion applicant generally argues that which is not claimed, and therefore prosecution is now closed, as this rejection is final.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Hershey (US 6,329,928 B1).

Regarding claim 14, Hershey discloses an electromagnetic field system, comprising: a structure including an electrically conductive grid array having a grid opening size (building frame 10); and means for generating a quasi-static non-propagating electromagnetic field within said structure by feeding a frequency signal into said electrically conductive grid array (Col. 3 lines 40-57); wherein the frequency of said frequency signal is selected such that the dimension of the grid opening size is small relative to the wavelength of said frequency signal. (Col. 4 lines 17-30)

Regarding claim 15, Hershey discloses a system wherein the frequency of said frequency signal is selected such that the wavelength is greater than twice the dimension of the grid opening size. (Col. 4 lines 17-30)

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2682
